Press Release

REGGIANI PRESENTS OUTINE, THE NEW 24VOLT ULTRA MINIATURIZED LIGHTING SYSTEM

Extreme flexibility and ultra miniaturization with the new Outline 24V system by Reggiani

Reggiani expands its product offering with Outline, a new low voltage lighting system (24V), ultra miniaturized and suitable for hospitality, residential and retail spaces.

Outline is a system designed to face the continuous need for miniaturized lighting products and their structures. Track, projectors, pendants solutions and linear lighting fixtures belonging to the system, are therefore distinguished by their dimensions and their ability to fit discreetly into any architectural context.

The system includes 24-V track in recessed, surface and pendant configurations, all only 11mm wide. A key characteristic of the system is the ability to create different, more organic configurations: Outline 24V is also available as a curved option, allowing to use the track in a creative way, adapting to architectural details and personalized layouts. The 10mm height of the track guarantees cleanliness and simplicity: this provides the ability to imitate a recessed effect without complicated ceiling details. Outline 24V track is available in 4 different color finishes: embossed matt white, embossed matt black, brushed gold and anodized bronze.

Within the Outline system we find a new family of 24V projectors, Yori Outline 24V (from 22 to 43mm in diameter), the pendant solution Yori Pendant 24V (from 22 to 43mm in diameter and three heights, 150mm, 200mm and 400mm), the new adjustable linear lighting solution, Incline Outline 24V - Adjustable (in 2 lengths, 62.5mm and 125mm), and to complete the range, the Linear Outline 24V linear module.

YORI OUTLINE 24V

The Yori projector is characterized by minimal design and excellent lighting results. The 7mm adapter disappears inside the 24V track, in both linear and curved configurations. Yori Outline 24V has 5 output options, from 2.5W to 10W, and lens options from 8° to 34°. Colour temperatures available are 2700K, 3000K and 4000K. CRI>90 assures better lighting performances through better color rendering.

The projector is also available in Zoom version, which allows adjustment of the beam from 7° to 37°.

The Yori Outline projector is available in 11 finishes: embossed matt black, chrome, brushed gold, anodized bronze as standard. Yori Outline 24V offers high levels of personalization thanks to the wide range of interchangeable accessories (color and selective filters, concentric circles etc...).

The Yori Pendant Outline 24V is available both for linear and curved applications. The pendant solution keeps the same lighting characteristics and finishing seen in the Yori Outline Projector family.

INCLINE OUTLINE 24V - ADJUSTABLE

The Outline 24V system includes the linear solution Incline Outline 24V - Adjustable: characterized by high performances, miniaturized sizes, flexibility and complete integration, thanks to its adjustability. Incline Outline 24V - Adjustable represents a sound retail lighting solution, especially for shop windows and other architectural structures. The 90° adjustability makes it possible to direct the light where it is needed. The custom-made optics assure optimal performances with minimal glare (UGR<19). The product is available in two wattages, 3W and 6W, and beam angles from 18° to 50°. Colour temperatures available are 2700K, 3000K and 4000K. The possibility to add magnetic accessories to the product make possible the desired lighting result.

LINEAR OUTLINE 24V

Linear Outline 24V - Opal has been conceived as a minimal lighting module: it represents a non-intrusive solution and assures comfortable, diffused lighting. Its 8mm height guarantees complete integration within 24V track. The combination of Linear Outline 24V with projectors and pendants allow perfect balance between accent and diffused lighting. Linear Outline 24V is available in 3 wattages, 7.4W, 14.5W and 21.6W, and three lengths: 674mm, 1174mm and 1674mm. Colour temperatures available are 2700K, 3000K and 4000K.
